

Online Event Management System - Detailed Development Process

Project Name

Online Event Management System

Tools Used and Why Used

- XAMPP – Used to run Apache and MySQL locally.
- PHP – Used for backend development and database connectivity.
- MySQL – Used to store event, booking, customer, and payment data.
- HTML – Used to create webpage structure.
- CSS & Bootstrap – Used to design responsive and professional pages.
- JavaScript – Used for client-side interaction.
- VS Code – Used for project development.
- Git & GitHub – Used for version control and source code hosting.

1. Software Download Process

→ XAMPP Download:

1. Open browser.
2. Visit <https://www.apachefriends.org>
3. Download XAMPP for Windows.
4. Install XAMPP.
5. Open XAMPP Control Panel.
6. Start Apache and MySQL.

→ VS Code Download:

1. Open browser.
2. Visit <https://code.visualstudio.com>
3. Download Visual Studio Code.
4. Install VS Code.
5. Open VS Code and create/open project folder.

2. Project Folder Creation

1. Open File Explorer.
2. Go to XAMPP htdocs folder.
Example: C:\xampp\htdocs or C:\Temp\XAMPP\htdocs
3. Create folder: event-management
4. Open this folder in VS Code.

Code Area:

3. Database Creation Process

1. Start Apache and MySQL from XAMPP.
2. Open browser.
3. Visit: <http://localhost/phpmyadmin>
4. Click New.
5. Enter database name: event_management
6. Click Create.

SQL Area:

4. Table Creation Process

1. Open phpMyAdmin.
2. Click event_management database.
3. Click SQL tab.
4. Paste SQL query.
5. Click GO.
6. Repeat for all tables.

Tables:

- client
- event
- vendor
- booking
- staff
- payment

SQL Area:

5. Database Connection Process

1. Open VS Code.
2. Open event-management folder.
3. Create db.php.
4. Paste database connection code.
5. Save file.
6. Open browser.
7. Visit:
<http://localhost/event-management/db.php>
8. Verify successful connection.

Code Area:

6. Home Page Development

1. Create index.php.
2. Design navigation bar.
3. Add banner section.
4. Add service section.
5. Add footer.
6. Save file.
7. Test in browser.

URL:

<http://localhost/event-management>

Code Area:

7. Other Page Development

Created:

- services.php
- gallery.php
- feedback.php
- booking.php
- payment.php
- login.php

For each page:

1. Create file in VS Code.
2. Design page.
3. Save file.
4. Test in browser.

Code Area:

8. Testing Process

1. Open Home Page.
2. Open Booking Page.
3. Submit form.
4. Verify data in database.
5. Check payment flow.
6. Check feedback submission.
7. Verify all links and menus.
